

organic silicon, marin ingredients of glucosamin, chondroitin, MSM, magnesium, - organic silicon (5000 mg/L Si)

Manufacturer:Distri'biocom

Criteria associated:

:

General informations

SiliSilimarine©, The benefits of marin ingredients for bones and joints:

LGB Bio laboratory is a french company specialised in organic silicon formulations. It has formulated Silimarine© with a natural organic silicon combined with marin ingredients.

Diatoms are microscopic seaweeds rich in silicon, an essential oligoelement in the development of bones and connective tissues.

The marin magnesium is a natural mineral highly bioavailable by the organism.. Magnesium contributes to most enzymatic reactions of our metabolism.

Phycocyanine, named the blue gold of the spirulina, is a combination of proteins and pigments which takes part of the spirulina photosynthesis. Spirulina is often used in cosmetic because it promotes cell regeneration.

Chondroitin and glucosamin sulfates are two compounds involved in hyaluronic acid and cartilage synthesis. These ingredients are extracted from fish and crustaceans shells.

MSM (Methyl-Sulfonyl-Methane) is an organic sulphur source extracted from seawoods and seafood. Sulphur is presents in our collagen and our joints.

Composition

Composition: Ro water, stabilising agents (vegetable glycerol, phosphoric acid), diatomaceous earth (organic silica), sulphate glucosamin*, MSM*, sulphate chondroitin*, marine magnesium (magnesium oxide), potassium sorbate, spirulina extract (phycocyanine), natural flavour

* Allergens: contain derived substances from fish and seafood

Composition for 20ml / 40ml :

Organic silicon: 100mg (20ml), 200mg (40ml)

Sulphate glucosamin: 300mg (20ml), 600mg (40ml)

MSM: 300mg (20ml), 600mg (40ml)

Sulphate chondroitin: 100mg (20ml), 200mg (40ml)

Marine magnesium: 50mg (20ml), 100mg (40ml)

Spirulina extract: 200mg (20ml), 400mg (40ml)

Advice for use

Advice for use

Shake well before using. Take one or two doses of 20 ml during the meal. Use the dispenser cap

Do not drink from a bottle.

Never exceed the recommended daily dose.

Once opened in the refrigerator, consume quickly.

This food supplement should not be used as a substitute for a varied, well-balanced diet. Keep out of the reach of children. The product concerned is not a medicinal product. The sedimentation is normal and does not

adulterate the quality of the product.

More informations

Silimarine combines many active ingredients which have been studied for their benefits on the organism.

Diatoms contain more than 75 % of natural silica. Silicon is present in our whole organism: skin, joints and connective tissues, veins, hair, nails... Diatoms are also a source of many oligoelements as calcium, manganese, magnesium, iron which are essential in our metabolism.

Marin oxyde magnesium is more available than its synthetic molecule. This mineral contributes to muscular and tissues formation. It also maintains healthy bones and teeth.

Sulphur is found in the collagen of the skin and in connective tissues. Sulphur in joints contributes to the formation of chondroitin sulphate, glucosamin sulphate and hyaluronic acid, improving the joint elasticity. MSM is a marine source with a high bioavailability.

Chondroitin and glucosamin sulphates are two compounds present in joints and cartilage, giving flexibility to them. The combination glucosamin-chondroitin is advised because they are complementary.
